Geneva International Airport upgrades FASTCOM SMACS solutions installed in the year 2010

- **Geneva Airport needs to secure the access between national and international zones.**

- **The SMACS solutions of FASTCOM have been operational since 2010 to provide this security.**

- **In 2024, SMACS installations are upgraded as part of a plan to ensure the long-term viability of the critical infrastructures.**

Lausanne, Switzerland – 17 of July 2024

FASTCOM Technology SA announces the completion of the project with Geneva International Airport to upgrade the SMACS installed in the year 2010. The SMACS ensures secure access between the national and international zones of the airport. Installed almost 15 years ago, it has operated without disruption ever since. In order to guarantee its longevity, an upgrade is being carried out.

The challenge: Geneva International Airport needs to manage access between the national and international zones. To achieve this, SMACS solutions were installed in the year 2010. After almost 15 years of continuous and undisturbed service, 24 hours a day, 7 days a week, it is required to ensure the system's longevity, while guaranteeing the business continuity. In addition, as part of the upgrade, greater energy efficiency and enhanced data security are required.

The solution: Marketed for over 25 years, the SMACS solutions line is regularly updated by FASTCOM according to a strict versioning management. In the new versions, the fundamental SMACS functionalities are guaranteed, while technological, design and user experience improvements are implemented. This strategy makes it easy to update the installed SMACS.

«SMACS are important solutions for guaranteeing the level of security required for our activities. After nearly 15 years of continuous use without a hitch, it was important to implement an upgrade to ensure their longevity. The upgrade also enabled us to improve our energy efficiency and data security. »

Mr. Sansonnens, security and IT services expert, Geneva International Airport
